Ideation Phase | Define the Problem Statements

Date: 27 October 2026 | **Team ID:** SWUID2026403391 | **Project Name:** Agri-Tech (Smart Farming Management System) | **Maximum Marks:** 2 Marks

Customer Problem Statement Template:

To define the core problems farmers face in managing their crops, weather risks, pests and resources, and use those insights to guide the development of Agri-Tech.

Who	I'm trying to	But	Because	Which makes me feel	Solution
Farmers growing crops on small and medium farms	Make timely, informed farming decisions	Weather, pests and soil issues are hard to predict	Digital tools and expert help are not accessible	Anxious, unsupported and at risk of loss	A multilingual smart farming platform

Problem Statements (PS):

Problem Statement (PS)	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1	a small-scale farmer	decide the right time to sow and irrigate my crops	weather forecasts are unreliable and not specific to my farm	I only depend on general regional information	anxious and afraid of crop loss.
PS-2	a crop grower	detect pests and soil problems early	I notice them only after the damage has spread	I have no soil analysis tools or timely pest alerts	helpless and worried about my yield.
PS-3	a farmer buying farm inputs	buy quality resources at fair prices	prices are unclear and orders untracked	I depend on local middlemen	cheated and financially stressed.
PS-4	a farmer with limited literacy	get expert advice and use digital tools	most apps are complex and available only in English	they are not multilingual or designed for rural users	left out of modern farming.
